

fabricatable
machines

Fabricatable machines

- Open informal research project – anyone can use and contribute
- Lives on github.com/Fabricatable-Machines

Goals

- Enable people to make and play around with custom digital fabrication machines
- Focus on making as many parts of a machine as possible

Whats is "Fabricatable"?

- Accesable techniques
- Simple and accesable BOM
- Focus on DIY over sourcing parts
- Complexity in CAD, simplicity in manufacturing and assembling
- Open source (files and toolchain)

Fabricatable business

- Gentleman agreements with royalties
- Direct sales
- <https://www.patreon.com/jensdyvik>

Lessons learned

- DIY rails is mostly suitable for small light duty machines
- Segmented rails are tricky
- "CNC friendly rack and pinion" works well
- Gearing is still needed for stiff machines
- HPL sheets work well
- Alu extrusions + FDM is more accesible than large format machining
